^*dmmodorca-s* is closely allied to the Gazelles, but differs from them in having an **elongated** neck and also a long tail. **A. **clarkei,*** the only species, is **limited to** Soxiialiland.

Lithocrani-us, not unlike the last, has a still longer neck* which makes it **almost** Giraffe-like **;** its **tail,** however, is short. The scientific **name is** derived **from** the **"** solid stony character of the **cranium."** In running, this **Gazelle** carries the head forward in a straight line with the body. It is African.

Dwrcotracfiis **with** one species, ***I), inegalotis* is a pigmy*** Gazelle restricted to **Somaliiaud.** Its likeness, on account of size and in **some** other superficial **features,** to the **Klipspringer,** led to its original confusion **with that genus *(Oreotragas,.***
